Application No.: 10/624013

Case No.: 54060US011

## Amendments to the Claims:

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims

- 1. (Currently Amended) A method of coating an area of the <u>a</u> surface of a substrate with layers of a first and second coating material which comprises the steps of:
- partially coated with a layer of a pressure-sensitive adhesive, the strip having a curved surface which is convex when the strip is viewed in cross-section and is positioned such that when the strip is adhered to a substrate by the layer of pressure-sensitive adhesive a portion of the curved surface overhangs the substrate, in which the masking material comprises a removable edge portion comprising said portion of the curved surface, detachably secured to the remainder of the strip which may be removed to expose a second curved surface on the remainder of the strip which is convex when viewed in cross-section and which is positioned to overhang the substrate, said removable portion and remainder of the strip having different dimensions,
- (ii) applying said masking material to the substrate such that the curved surface is adjacent the edge of the area to be coated,
- (iii) applying the first coating material over said area of the surface up to said masking material,
  - (iv) detaching and removing said removable portion of the masking material, and
- (v) applying the second coating material over the first coating material and up to the remainder of the masking material.
- 2. (Original) The method of claim 1, wherein the elongate strip is formed of a cold-weldable foam and has at least one cold-welded seam along its longitudinal length which maintains the configuration of the curved surface.
- 3. (Original) The method of claim 1, wherein the elongate strip comprises a pair of cold-welded scams and has a substantially oval or circular cross-section.

Application No.: 10/624013

Case No.: 54060US011

4. (Original) The method of claim 1, wherein the removable edge portion comprises a foam cord of substantially oval or circular cross-section detachably secured to the elongate strip.

- 5. (Original) The method of claim 5, wherein the foam cord and elongate strip are joined by a cold-weld.
- 6. (Original) The method of claim 1, wherein the removable edge portion comprises a foam strip detachably secured to a curved surface of the elongate strip.
- 7. (Original) The method of claim 6, wherein the foam strip is detachably secured with pressure-sensitive adhesive.
- 8. (Original) The method of claim 7, wherein the edge portion is detachably secured by a coldweld to the remainder of the strip.
- 9. (Original) The method of claim 1, wherein the masking material comprises a plurality of removable edge portions.
- 10. (Original) A method of claim 1, wherein the first coating material is a primer and the second coating is a paint.
- 11. (Original) A method of claim 1, wherein the surface comprises an automobile surface.
